Control & Monitor

Seamless Integration of Fleet Monitoring solution

The quick, advanced way to monitor taxiing fleet

Reduce Controller Workload

Controllers handling multiple movements require to monitor each one individually to confirm that they are taxiing in accordance with their clearances.

Become Aware

Tower.Link reduces the controller's workload and contributes greatly to reducing the human errors that occur due to overload

Runway Incursions

ICAO Doc 4444 - PANS-ATM

A Runway Incursion is defined as "Any occurrence at an aerodrome involving the incorrect presence of an aircraft, vehicle or person on the protected area of a surface designated for the landing and take off of aircraft".

Most Common Runway Incursion:

Incorrect entry of an aircraft or vehicle onto the runway protected area (without or contrary to ATC clearance or due to incorrect ATC clearance)

1748

2017

Runway Incursion (USA Only)

Integrated Control Station

Ergonomic Human Engineering

Touch screen design with added free digital handwriting, gives the operator full control over the airport traffic

Multiple screens

Get real time location and warnings about airport traffic

Real Time

Stand-Alone

Minimalistic footprint in the control room

Use Tower.Link without interrupting current facilities, use as many screens as you need.

TOWER.LINK

Touch Screen Interface

Get Ai recommendation directly to your workstation

**Safety
First**

Personal portable station

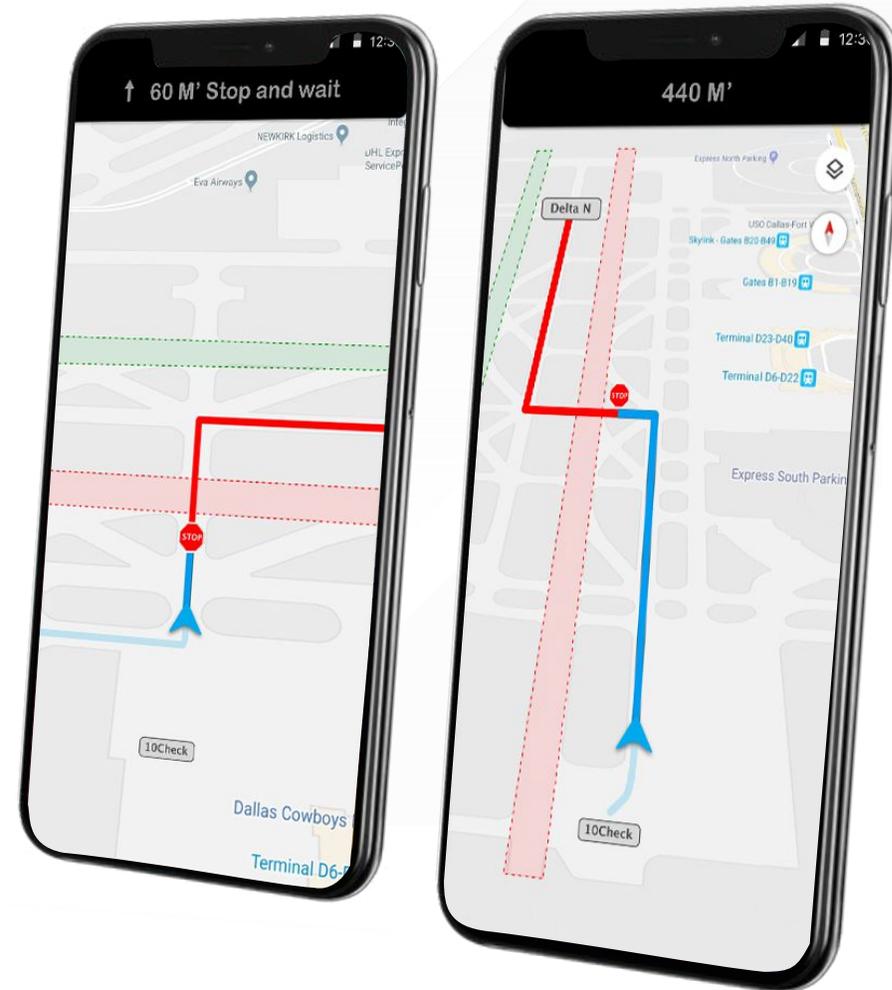

Designed for the ease of driver use

5 minutes qualifications

A quick, easy to use UI gives all users the ability to send path requests and receive taxiing routes.

See your location

Real time personal location on the navigation path sent by the Tower.
Immediate warnings when out of path

Sensors & Ai Decisions

Get quick, Accurate Solutions for taxiing conflicts.

Accuracy

M10 Motion Coprocessor

Separate chip to collect sensor data from integrated accelerometers, gyroscopes and compasses

Ai Decisions

Ai Recommendation

Select best path from a combinations of path options

Robust

Always on track

Refining of assisted GPS, GLONASS, Galileo, QZSS and Digital compass to get top of the line precision

Safety

Emergency Management

Automatic routes generator, send paths to emergency vehicles

Operational Use Case

Send and receive path example

01. Get Request

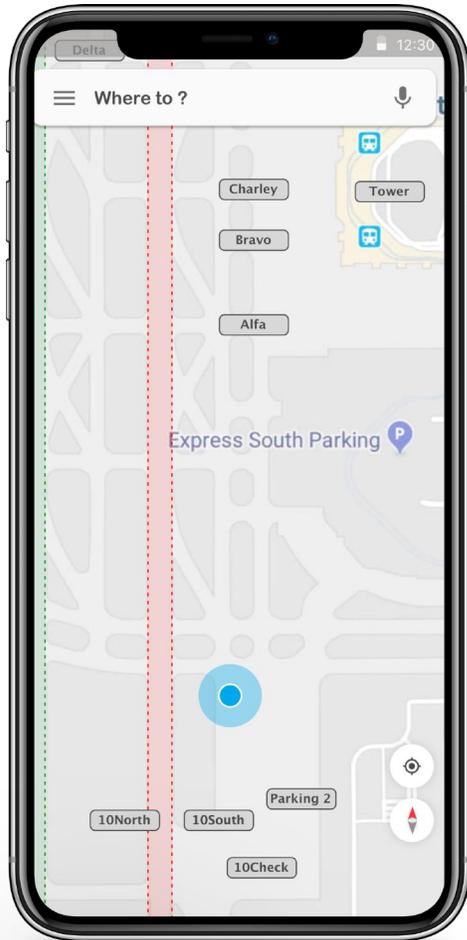

02. Select Path

03. Send Path

Select Destination

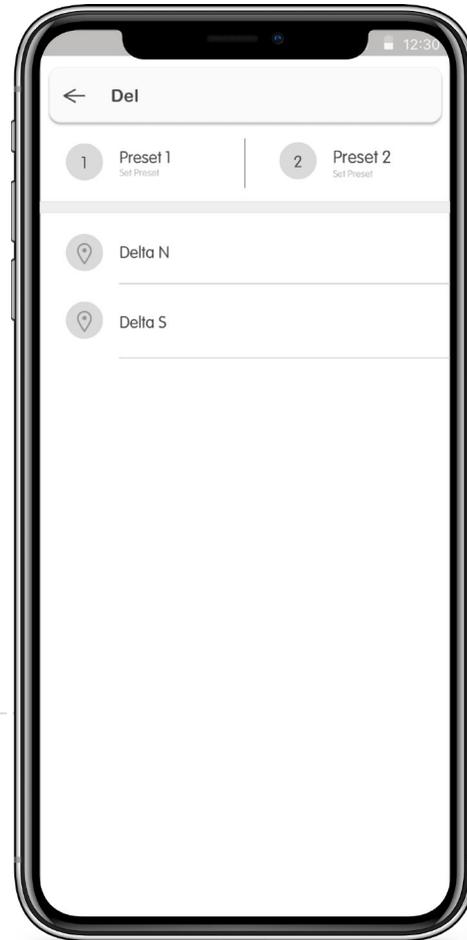

Click or Search for your destination

TOWER.LINK

Tap to select

Easy to select by clicking destination

Destination Search

Search from a pre entered list

Send Request

Send Tower your destination

Ai Paths Recommendations

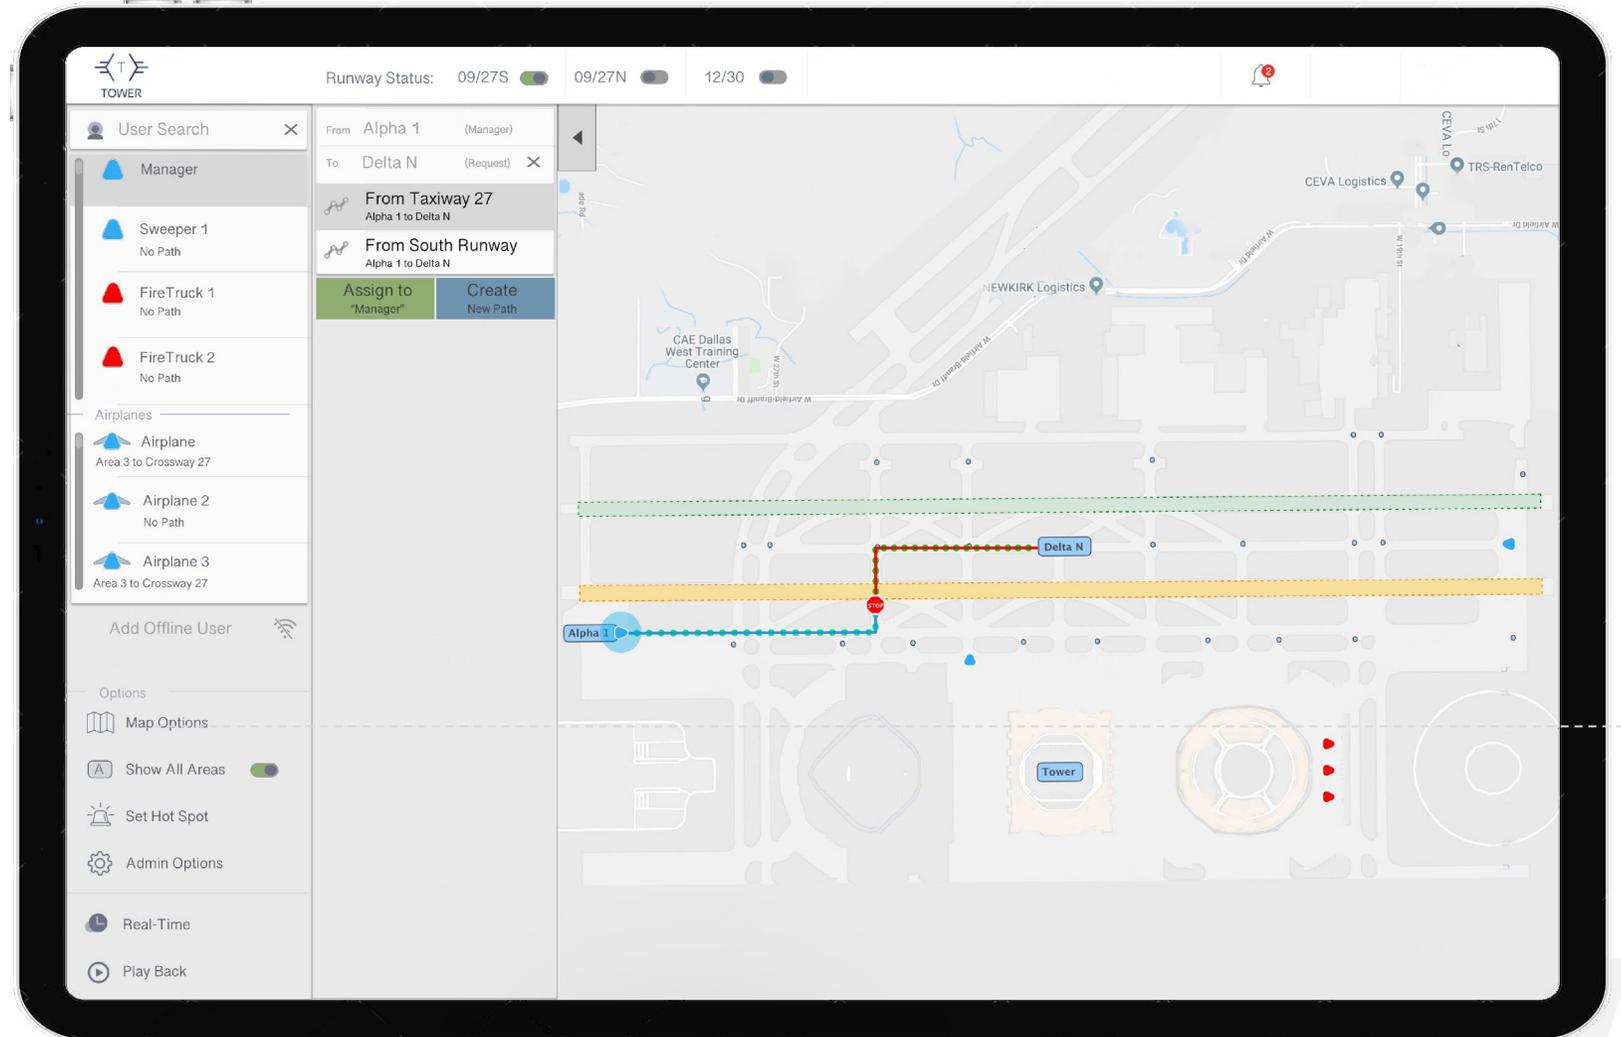

Click or Search for your destination

TOWER.LINK

Wait for Path

User waits for Tower path

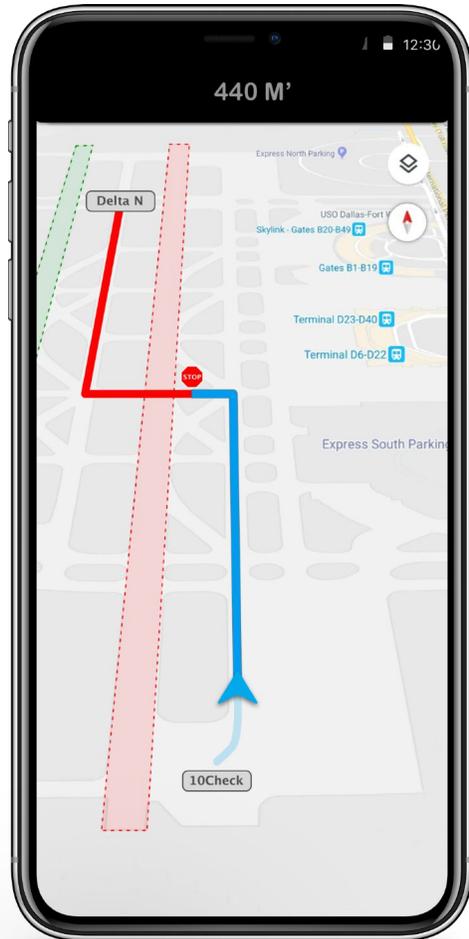

Select path

System Considers all available options

Navigation Tracking

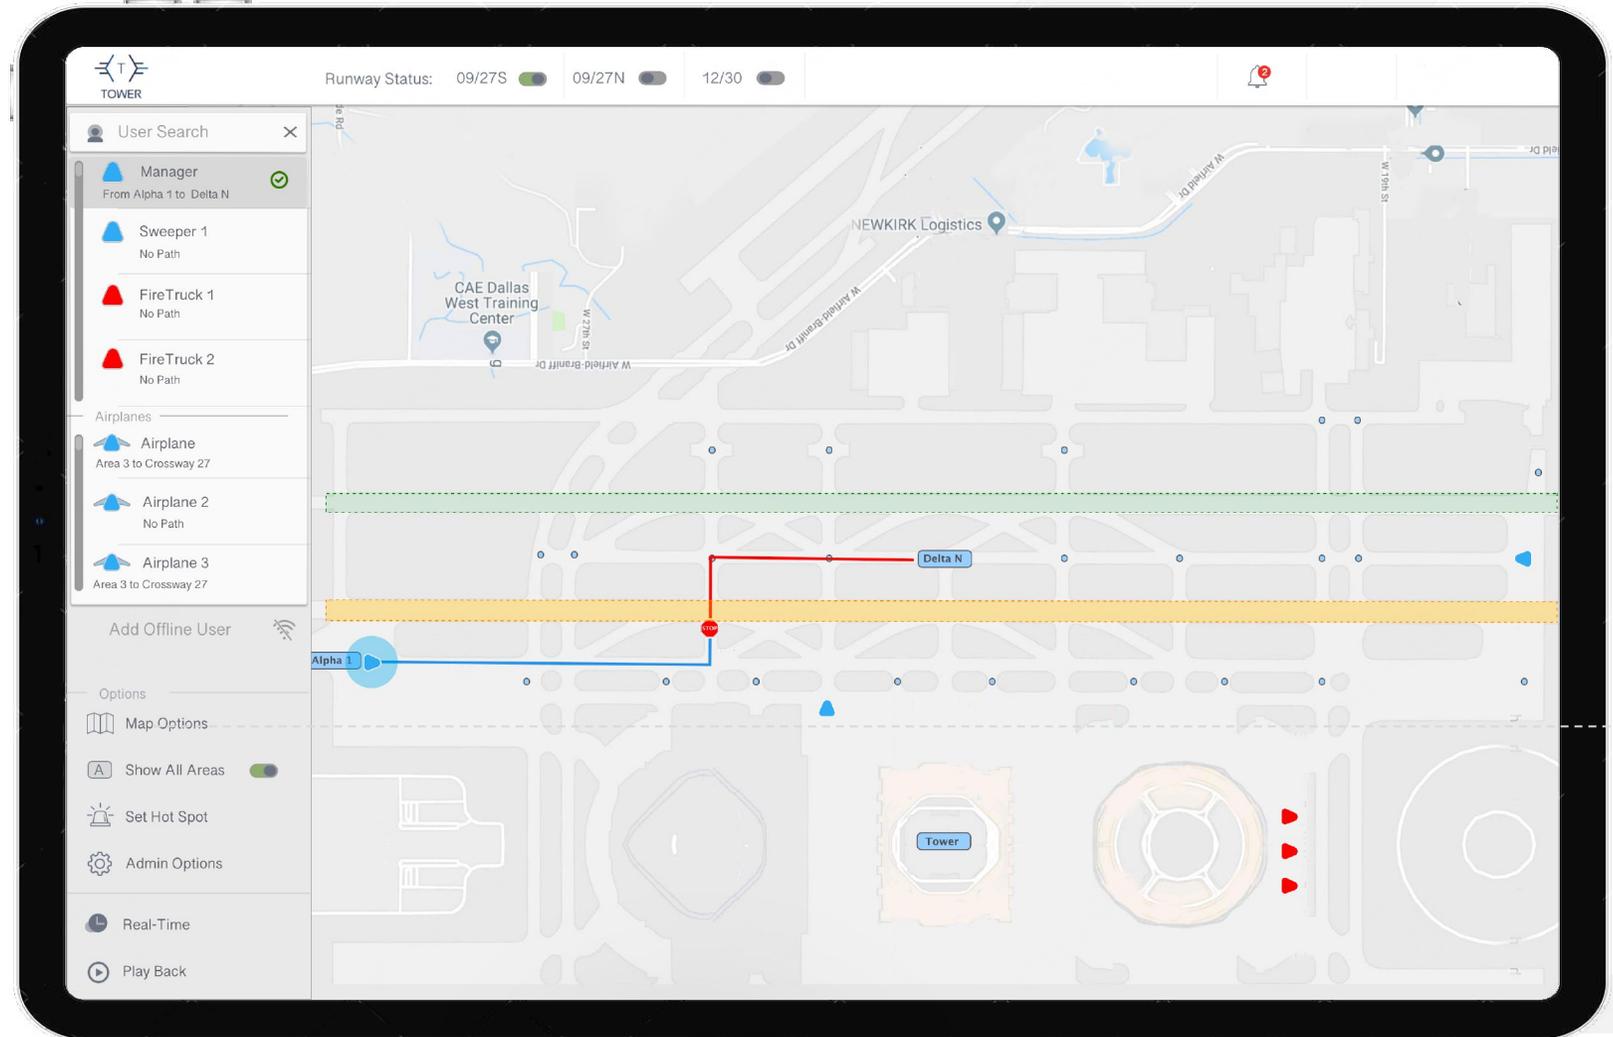

Continuous Airport Traffic Monitoring

TOWER.LINK

Always on Track

Monitor your traffic

Track Moving Traffic at the Airport

Safety First

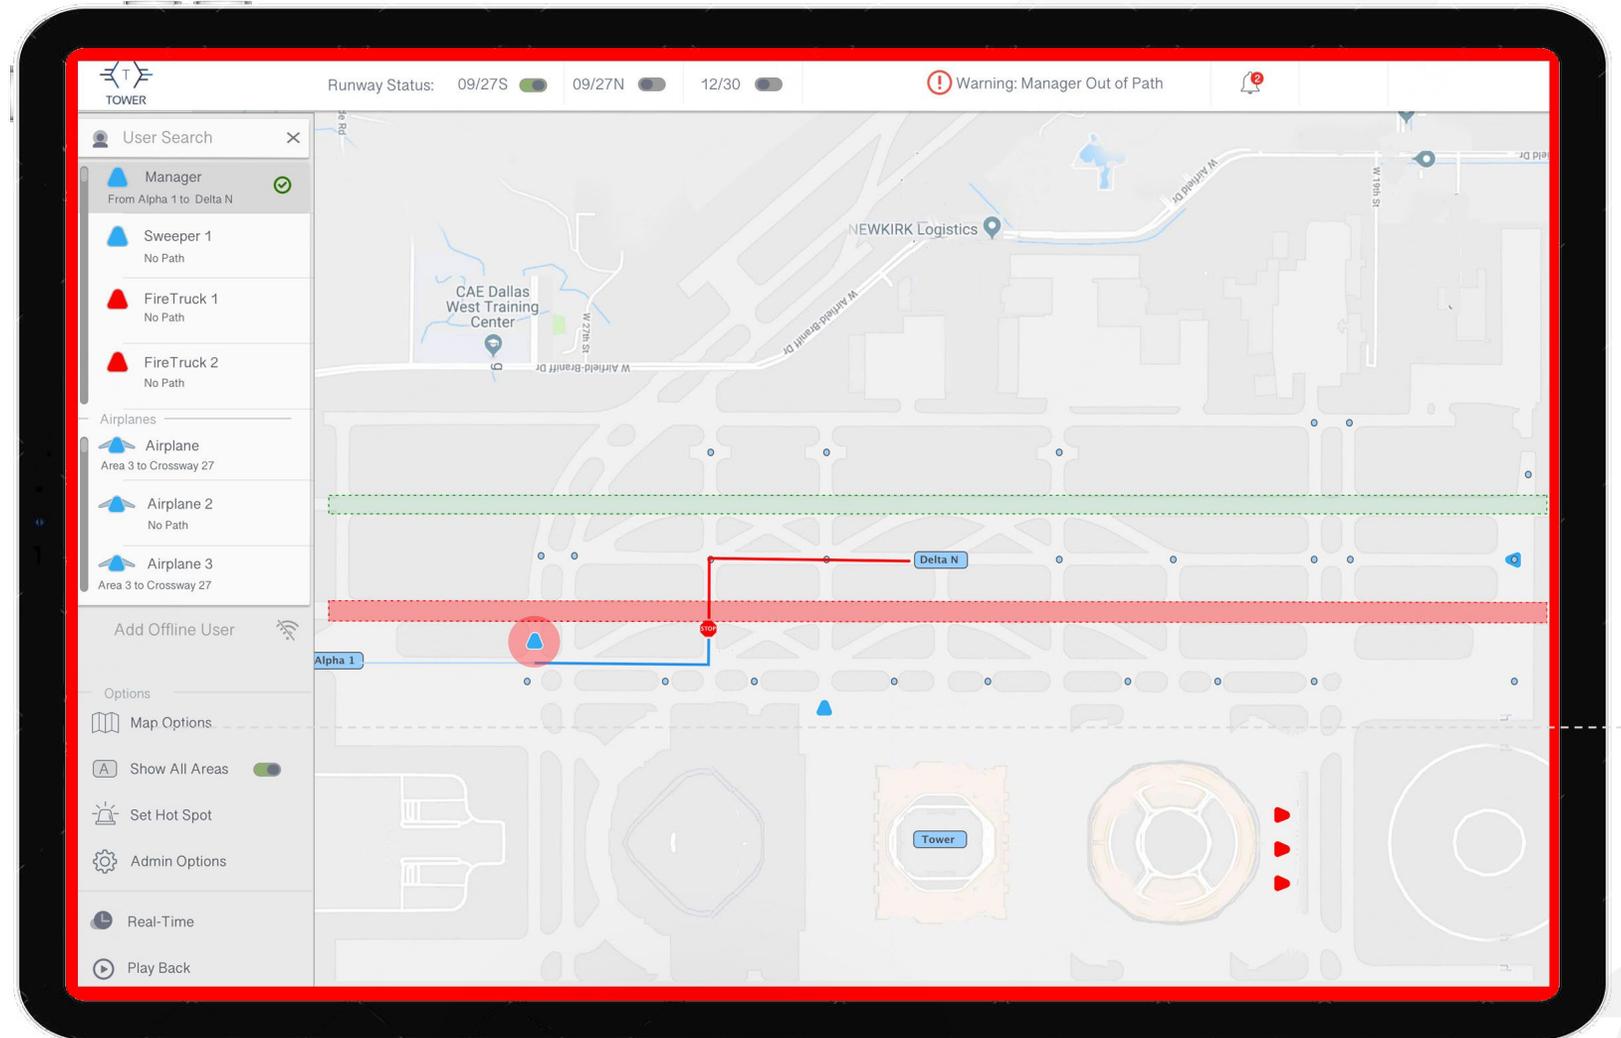

A variety of safety alarms for any case of navigation error

TOWER.LINK

Out Of Path

Warning Warning!

Avoid accidents

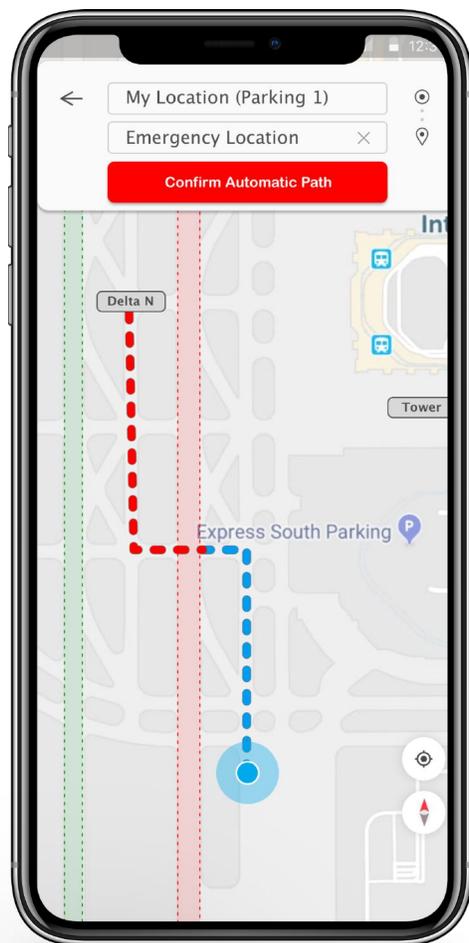

Clear Incursions area immediately

Emergency Control

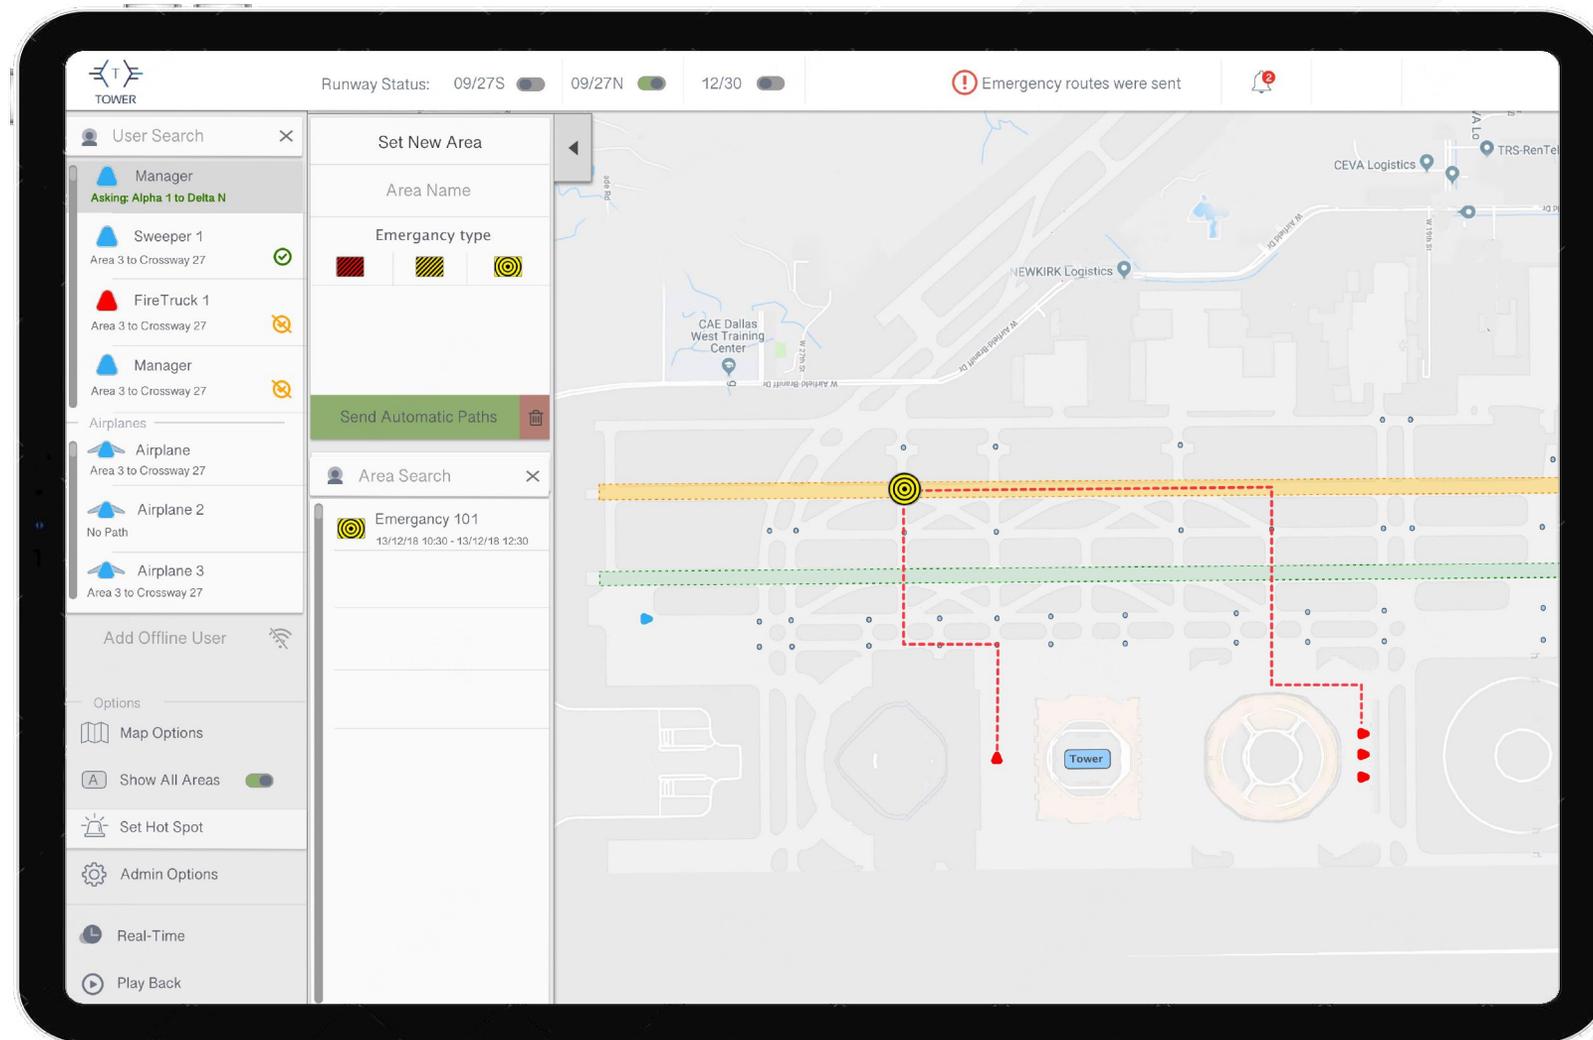

Automatic Paths Creation for Emergency Procedure

TOWER.LINK

Don't waste time

Know your way without calling the ATC

Mark Emergency Location

Multiple automatic paths sent to all Emergency vehicles

Fully Customized System

Tailored to your airport according to needs and requirements

Always Unique

Each airport has its own unique characteristics, System adjustment is performed according to these characteristics to create precise conditions for fleet management

100%

Set for your needs

CUSTOMIZE

Shift

01

Emergency Management

Automatic routes provider for all emergency vehicles straight to emergency location

02

Construction Area

Easy area closure seen on the map for all users. System will automatically detour this area.

03

Playback

Playback option allow you to debrief and train using the system saved information

04

Manage Qualifications

Get information about each user (last login, permissions, ...) Easy to set the next training

...

More & More

Many other features Assimilation of additional features according to the customer's requirements
